# Six Atlantic Clipper Flying Boats Scheduled To Go Into Service Early Next Year

Construction details of six "Atlantic Clipper" flying boats which are now being built by the Boeing aircraft company, of Seattle, and are scheduled to go into service early next year between U. S. and Europe, carrying 30 passengers and two-and-a-half tons of cargo on a 24-hour run from New York to London, were disclosed by Pan American Airways. The first of the new "gliders" which will be twice the size of the big home-made Clipper flying boats, is making a series of test flights across the Atlantic preliminary to the establishment of regular service. It is to come out of the factory for the open-air fitting of its 135-foot wings some time this fall.

Officials of the air line said that the Boeing Clipper, 136-foot, built is larger than the ships with which Columbus first crossed the Atlantic, and is the first airplane to be constructed strictly along shipbuilding lines.

The new Clipper will be equipped with four twin-engine, radial, air-cooled Wright cyclone motors of new design which have been under secret development for two years and will weigh 2,500 horsepower each, being the most powerful aircraft engine yet built. The United States airplane of this size, fully loaded, will be 42½ tons, but will have accommodations for 75 passengers and a crew of 10 on other than transatlantic flights. Engineers estimate that they will have a top speed of about 200 miles an hour and cruise at 150.

There are three separate decks in the Boeing Clipper. The upper flight deck housing not only the control cabin and necessary operating equipment of the crew, but also the quarters for the latter. The passenger cabin is located on the middle deck while the bottom of the hull is devoted to fuel storage and auxiliary engine spaces. The lower hull, in addition, is equipped with two powerful, high-wing monoplane with engine floats or "hanging" floats, which will be used in the event that they will be utilized as gasoline storage tanks.

## Oldest Daily Newspaper

London Public Ledger Received License To Print In 1762

When the Philadelphia Public Ledger did it was mentioned here that it was a London Public Ledger, even older than this one. Indeed the oldest daily newspaper published in this country.

Those who commenting on the role of the Morning Post, stated that the proprietor of the London Public Ledger, showed to us in his office overlooking the Tower one of the oldest copies, the first which came out on January 13, 1762. It was had a copy of it, and it is now in the possession of the elder Pitt in 1760. Soon after publication the London Public Ledger was published in the London "Times of the World" name.

It is not only a newspaper, however, a register of commerce and a directory of advertisements, but a paper. Today, it is still much the same, and is valued by city bankers and brokers for its complete list of commodity prices. At expensive a copy it may also be had for a few cents daily paper—Manchester Guardian.

## Over The Top

Japanese Aid 109 Succeds In Climbing Mount Fuji

A Heister detachment from Tokyo gives a curious human form to the certain Trench. The first turned a living ambition to climb Mount Fuji. He had at last succeeded in reaching the top of the mountain, and the Japanese flag was hoisted. The Japanese flag was hoisted. The Japanese flag was hoisted.

Tough Handy Men

Unemployed men in Creighton, England, have been taught handy jobs around the house in order that they can earn their living expenses. They were taught boot mending, clothing and furniture repairing, painting, paperhanging, among other trades.

The map which Cecil Rhodes used when he planned his campaign to take the destiny of the world into his own hands, was placed in the public library of Kimberley, South Africa.

Rice has never been tasted by millions of people in the northwestern section of China.

## Living In New Homes

Thirty Per Cent Of Population Of British Acquired New Homes

Since the War

Some 12 million people, or about 30 per cent of the population of England and Wales, have moved into newly built houses since the end of the Great War. The number of houses built since that time is now approaching three and a half million.

In the year ending March 31 last a record number of 346,000 houses were built in Great Britain, or 153,530 and 320,000 in 1934-35. More than four hundred out of every five houses built by private enterprise, and the remainder by local authorities, though the tendency has been for the proportion built by local authorities to increase of late.

The new dwellings built at the year-end last March about 17,000 had a reasonable annual value of less than £13 (or £20 in Greater London), and an additional 148,000 were assessed between £13 and £20 (between £20 and £30 in Greater London). Actual rentals paid per year normally exceed the assessed value, but, even so, these figures represent houses, with the means of all but the poorest of the working class.

For many years houses have been built primarily for sale, but last year about 145,000 were built to let, with the possible exception of the year for which no figures are available.

The greatest proportion of houses for letting in the history of the country—London, Bristol (London).

## Study Primitive People

American Doctor To Head Expedition To South America

Primatology, the study of primitive people, is the subject of a new book by Dr. H. H. Hooten, staff surgeon of the American Museum of Natural History, said to be the most important of the new sciences.

Dr. Hooten, who is a specialist in the study of primitive people, is the author of a new book, "The Study of Primitive People," which is a study of the primitive people of the world. The book is a study of the primitive people of the world, and is a study of the primitive people of the world.

## Trace Ancestry Of Eskimos

Believe They Descended America By Way Of Bering

A Smithsonian Institution scientist said there was no doubt the Eskimos of Alaska and Canada came from North America and perhaps were the first North American immigrants.

Dr. Hooten, who is a specialist in the study of primitive people, is the author of a new book, "The Study of Primitive People," which is a study of the primitive people of the world. The book is a study of the primitive people of the world, and is a study of the primitive people of the world.
